

How Java program work and its 3 components (JVM, JRE, JDK)

JVM (Java Virtual Machine)

- It's an abstract machine that doesn't physically exist but it is a piece of software that vary with the vary of OS.
- JVM is platform dependent

- JVM has JIT compiler. It takes Bytecode and convert it into Machine code

JRE (Java Runtime Environment)

- It has two things 1st JVM and ^{utility} library classes
 - take Bytecode as input
 - Java.math
 - Java.lang
 - Java.util

JDK (Java Development Kit)

- has → programming language
- compiler (Javac) - class file
- debugger

→ core java

JSE

Java Standard Edition

JEE

Java Enterprise Edition / Jakarta EE

JME

Java Mobile Edition.

Micro

JEE = JSE + API data

large scale
Project

Transaction API (Rollback, Commit)

Servlet, JSP, Persistence API

JME = API for Mobile Edition.

Interview Question

Q. why in Java a single file can have only 1 public class?

(i) main method should be inside public class

(ii) Public class name should be same as fileName.
